

**Letter of Intent**

between the

**Universidad de Concepción**

and the

**Geodetic Institute of the University of Bonn**

The purpose of this letter is to promote co-operation in research and education in the field of geodesy between the Universidad de Concepción (UdeC) and the Geodetic Institute of the University of Bonn within the framework of the initiative of the German Geodetic Commission (DGK) and UdeC.

Both institutions will make every reasonable effort to encourage direct contact of scientific staff in order to prepare the grounds for a fruitful co-operation. They agree to enter into negotiations on the following general forms of co-operation:

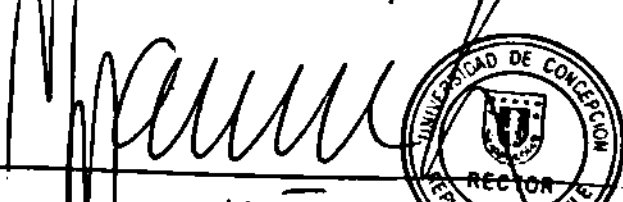

- I. Joint research activities
- II. Exchange of academic material, publications and information
- III. Exchange of scientific staff members for research, lectures and discussions
- IV. Exchange of graduate and undergraduate students for education and research
- V. Co-organisation and participation in lectures, seminars and conferences

The areas of joint activities, the conditions for utilising the results achieved and the arrangements for specific visits, exchanges and other forms of co-operation will be negotiated separately for each specific case.

It is understood that all financial arrangements between the two universities have to be negotiated individually.

It is also understood that the implementation of any agreement will commence upon its signing by both parties, and that it will be valid for five years, subject to revision or modification by mutual consent. The possibility and terms of renewal of any agreement will be discussed by the representatives of both Universities within six months prior to its termination.
